# Store Pricing

DSS

1. How Does It Work?

1.1 Module configuration:

Navigate to Stores ⇒ Configuration ⇒ DSS ⇒ Store View Pricing

1.2 General configuration:

- **General Settings ⇒ Debug Mode :** Choose **Yes** to enable the debug mode (log file will create in var/log folder).
- **Price Settings :** To Configure Catalog Price Scope, click on path. And select **Store View**.

This extension helps store owners to set up different prices (cost, regular, special prices, etc.) for the same product per store view.

By default, product prices can be configured to apply at either the global or website level.
If applied to the global level, the same price is used throughout the store hierarchy. If applied to the website level, the same product can be available at different prices from stores that are associated with different websites.

With this extension, product prices can also be configured at the store view level. This means the same product can have different prices per store view.

Key Features
Can setup product prices (cost, regular, special prices, etc.) at the store view level
Compatible with Magento 2 Regular, Special & Tier Price Importer extension
Feature Highlights
Set Prices at Store View Level
With this extension, the store admin can set different prices for the product as per store view.

All these price types can have multiple values

Regular Price
Special Price (along with the from/to dates)
Cost
Tier Price / Group Price (will be supported soon)
etc.
M2 Store View Pricing - Admin Product Edit PageM2 Store View Pricing - Storefront Product Page
By default, the scope of product pricing is global.
